Changes

- [07] TST: Supplement of chapter 2.3 "Sustainability Check According to Technical Compliance", Chap.5 "Appendices": New "template_PSDS-Sustainability" added
 Template PSDS: Customizations in formatting and supplements at the PSDS template:
- "Max Gross Weight / p-pack" (handling unit) depending on specific requirements based on: 1. Country, 2. Conti Location
 - Cell alerts with light-red fields: This field color appears, then information or values are: - not present (missing), - are incorrect, - there are contradictions or inconsistencies. Detailed explanation under "Intro" in the PSDS Excel file.
- New: "Template_PSDS-Sustainability": Sustainable packaging material information (legal & environmental requirements)
 Examples have been updated

Packaging Specification Data Sheet (PSDS)

Doc. Type	TST	
Doc. Num.	N 098 01.01	
Doc. Part	000	Doc. Ver. 07
Date:	2024-12-06	Page 2 of 7

1 SCOPE

The Supplier is responsible for the quality and delivery of the products and therefore also for compliance with the packaging requirements according to TST N098 00.01 000 "Packaging - Definition, Process, Requirements". In order to ensure safe handling (in accordance to accident prevention and other regulations) and smooth operations, it is essential for all goods to be delivered in accordance to these requirements.

It is the responsibility of the Supplier to provide individual and/or collective packaging for the goods. The packaging provided by the Supplier shall ensure that the goods reach their destination in sufficient condition.

Among other things, the packaging shall protect the goods from damage (loads in transit) and from deterioration caused by environmental effects. The packaging shall also protect personnel against hazards resulting from the goods themselves (e.g. regulations concerning the handling of hazardous goods).

The offer of the Supplier shall consider the packaging concept described within this "Packaging Specification Data Sheet" (selected Status: SCM SCR) during the Supplier Component Review (SCM SCR). The Packaging Specification Data Sheet (PSDS) in the phase of SCM SCR should be adjusted, agreed and signed by Supplier and Customer SCM (incl. Packaging specialist).

The final packaging concept of the "Packaging Specification Data Sheet" (selected Status: PPAP) shall be released and agreed during the Production Part Approval Process (PPAP). The PSDS has to be signed by all concerned departments at Supplier and CA (SCM, Production Planning, Warehouse, Label Coordinator, Packaging Engineer / Industrial Engineer and SQM / Plant Production Quality).

The PSDS is part of the contract (GSCC) with the Supplier. The PSDS has to be filled out for each product (for Mechanics and Electro Mechanics) and for the serial and substitute packaging concept.

The necessity of the PSDS for Electronic parts or Electronic part groups should be clarified bilaterally between Supplier and receiving Customer plant (depart. SCM). In case of a defined returnable packaging concept, the "Packaging Loop template" has to be filled out for each part-no., too.

Deviations of the final agreed packaging concept are not allowed without prior written announcement and approval from receiving Plant SCM/ Packaging Engineering. Packaging that proves unacceptable for whatever reason (quality, transport, production process, safety, etc.) must be changed upon request from Packaging Engineering.

Remember, the responsibility for ensuring component quality - from Supplier plant to the point of use - remains with the Supplier of the part/product.

No guarantee can be given in respect of the translation.
In all cases the latest English-Language version of this standard shall be taken as authoritative.

2 PACKAGING ACTIVITIES AND RESPONSIBILITIES

The Request for Quotation (RFQ), the SCM Supplier Component Review (SCM SCR) as part of the Sourcing Process and the Production Part Approval Process (PPAP) are phases within the whole process of the Product Life Cycle (PLC), which is divided into separate phases and gates.

In the following sections will be defined the packaging-relevant main activities and responsibilities at the phases/gates of RFQ, SCM SCR and PPAP for the Suppliers and the Packaging Engineer and other concerned departments at the Continental Automotive (CA) receiving plant.

2.1 Request for Quotation (RFQ)

Standard packaging information and requirements shall be provided and if possible the Packaging Engineer of CA receiving plant has to pre-fill the Packaging Specification Data Sheet (PSDS) for serial and substitute packaging concepts incl. definition of label type.

AP prepare and send out RFQ to Supplier incl. standard packaging information and basic precondition requirements of e.g. quality and protection measures, packaging standards, handling, labelling: PSDS and the "Packaging Loop" template.

2.2 SCM SCR Process

The Supplier should submit a revised packaging proposal considering the precondition quality and packaging requirements of CA (within the PSDS) and shall agree with CA upon packaging.

In each case where a returnable packaging concept will be agreed, a substitute packaging concept has to be submitted and agreed, too.

In case of choosing returnable packaging concept, the "Packaging Loop" template should be **prepared before SCM SCR Meeting** bilaterally.

The PSDS and the "Packaging Loop" template should be completed and open points clarified (before SCM SCR Meeting) with Supplier, Sourcing Team (incl. CA Plant SCM and Packaging Engineer) and New Product Launch Team. If necessary, SQM CI will answer packaging issues related to quality, corrosion and cleanliness requirements.

The packaging concept (serial and substitute packaging) within the PSDS and the definition of needed quantity of returnable packaging within the "Packaging Loop" template should be signed at the SCM SCR Meeting.

No guarantee can be given in respect of the translation.
In all cases the latest English-Language version of this standard shall be taken as authoritative.

2.3 Sustainability Check According to Technical Compliance

[07]

According to Continental's Technical Compliance requirements, all laws and regulations relevant to packaging materials must be verified and confirmed by the supplier prior to shipment.

Before any materials are shipped, the supplier must confirm that all applicable legal and regulatory requirements are met. This includes ensuring compliance with relevant laws and regulations listed at "Technical Certificate of Conformity for Environmental, Health related & other Regulatory & Legal Requirements for Packaging Materials" :

[Link to: Technical Certificate of Conformity](#)

Verification should be documented using the table "template_PSDS-Sustainability". The checkboxes in the template must be accurately marked to indicate compliance with each applicable regulation.

Shown here as a picture:

Select	Supplier is obliged to comply with all applicable legal regulations and with all safety, environmental and legal requirements in relation to the contract products. In addition, the supplier must ensure that its supply chain complies with all applicable legal regulations and with all safety, environmental and legal requirements in relation to the contract products. The supplier hereby confirms that the packaging is compliant (including technical Compliance)
Select	The supplier hereby confirms that the use of packaging materials within this packaging concepts are according to the TST N098 00.01 000 Packaging Requirement (chap. "Packaging Materials and Environmental Requirements" esp. schedule "Approved Materials and Not Approved Materials"). No usage of "Not Approved Materials".

The completed "template_PSDS-Sustainability" and all required supporting documentation and certificates must be submitted together in the same communication channel. This information package must be sent before the final definition of the "Packaging specification for PPAP (Production Part Approval Process)" to facilitate review and approval.

2.4 Production Part Approval Process (PPAP)

If the "Product Validation" has been passed successfully, the last step for the finalization of the PSDS will be started through PPAP.

The final packaging concept within the PSDS, incl. definition of type of label, shall be adjusted and released with all other concerned departments at Supplier and CA departments of SQM/Plant Quality, Production Planning, Warehouse, Label Coordinator, Packaging/IE and Plant SCM. They all have to be checked whether their special requirements are considered.

They all have to agreed and signed the PSDS.

According to the final PSDS, the "Packaging Loop" template has to be reviewed, agreed and signed by Supplier and Continental Automotive (Plant SCM/ Packaging Engineer), too.
